Mortality rate from accidental falls, all ages 2021-23

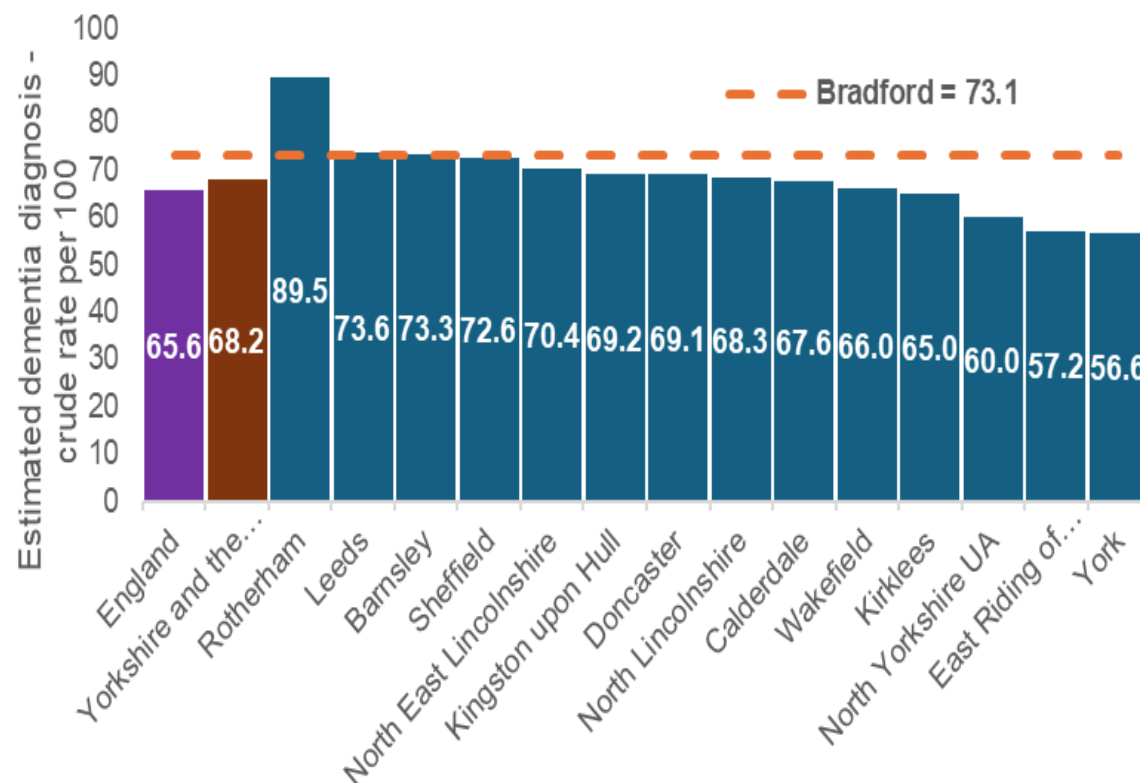

Over the 3-year period the mortality rate from accidental falls (all ages) for Bradford was 12.6 per 100,000 (171 deaths over the period). The district had a lower rate per 100,000 population compared to England (13.7) and Yorkshire and the Humber rate (13.5).

Mortality rate from accidental falls, all ages	Bradford		Yorkshire and the Humber	England
	Count	Rate	Rate	Rate
Male	103	17.2	16.5	17.1
Female	68	8.9	11.3	11.3
Total (all persons)	171	12.6	13.5	13.7

Bradford had a higher mortality rate in males (17.2 per 100,000 population) than females at 8.9 per 100,000 population. This is a similar picture when comparing regional and England rates. The district has a lower rate of mortality in females (8.9) than regional (11.3) and England (11.3).

Estimated dementia diagnosis rate (aged 65 and older) 2025

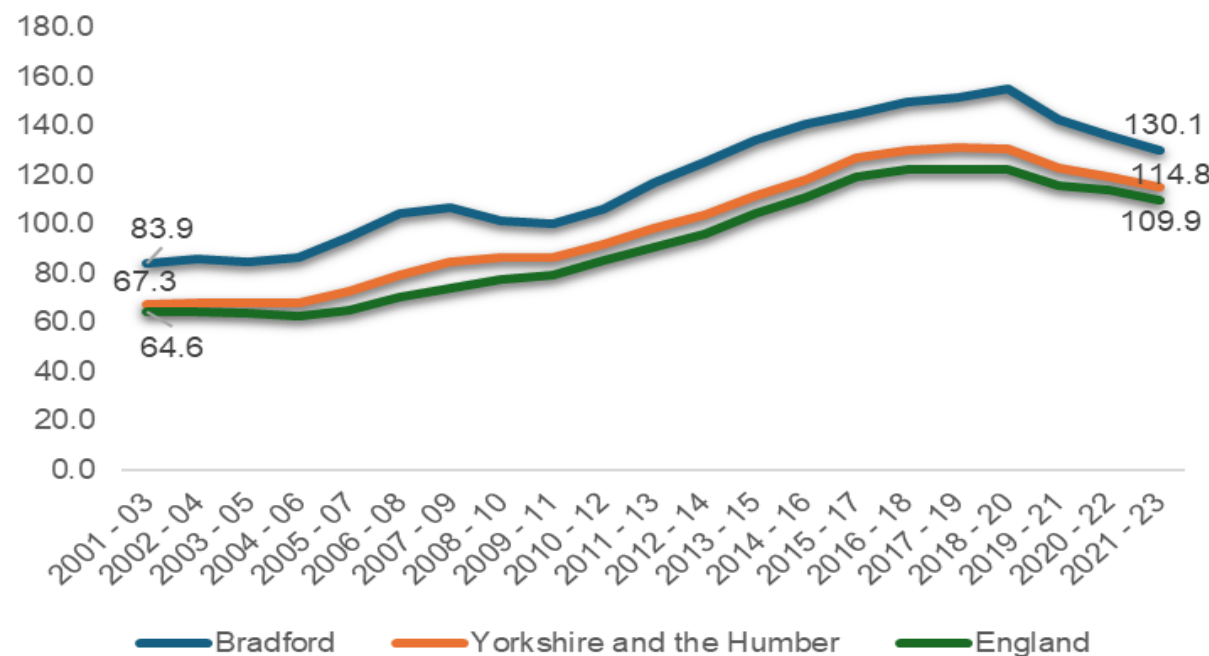

The estimated dementia diagnosis rate (aged 65 and older) in Bradford is 73.1 per 100, this is higher than both regional (68.2 per 100) and England (65.6 per 100) rates.

Bradford had the 4th highest estimated dementia diagnosis rate in Yorkshire and the Humber behind Rotherham, (89.5) Leeds (73.6) and Barnsley with 73.3). The range of diagnosis rates within the region is between 56.6 (York) to 89.5 (Rotherham)
